KIC History

- 1998** KOREA INTER CROSS Co., Ltd Found
"Technical Concentrated Small & Medium Co." Certification
- 1999** "One million Dollar Export Tower" awarded
"Prize of Prime minister" awarded
- 2001** Sihwa KIC Head office & main factory completion & relocation
- 2002** Technical Assistance to IRAN "KSV KHODRO Co." for SAIPA & KHODRO
- 2005** "USD Five million Dollar Export Tower" awarded
Awarded "Stone Pagoda Industrial Medal" by the President
- 2007** HYUNDAI MOTORS CO. Tuning Shock Absorber Cooperator Contract
- 2008** Russia [TagAZ Motors Co.] S/ABS Supply Contract
- 2009** Start Shock Absorber Business in After Market
- 2011** Awarded Prize of Minister of Knowledge Economy
- 2014** Increase the application of the global car models and parts specs
- 2015** Ansan MTV KIC Head office & Main factory relocation
- 2017** Awarded by achieving \$ 100 million export accumulated
- 2018** Expected to attain "Ten million Dollar Export Tower" awarded.
- 2019** Selected as "Small Giant Company of Korea"
Selected as "Great Work Place for Root Company"

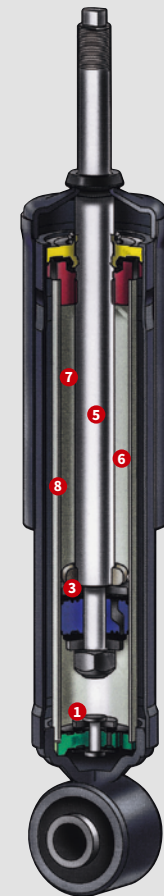

Shock Absorber Structure

Suspension Struct

Semi Struct

Conventional Shock Absorber

① BOTTOM VALVE

KIC compression disc valve, which provides excellent performance, has automatic control actions similar to the rebound piston disc valve.

② OIL SEAL

The special oil seal, made of oil and wear resistant high quality synthetic rubber, having high sealing efficiency to keep vital oil and gas in and dirt out of the cylinder.

③ PISTON VALVE

KIC unique automatic control rebound disc valve, which automatically adjusts to all ride conditions, is designed to assure maximum performance and smooth ride control. It also provides instant response for full performance without any time lag.

④ ROD GUIDE

The sintered iron rod guide with a PTFE bushed sliding surface assures smooth rod action with minimal resistance and wear.

⑤ PISTON - ROD

The piston-rod, larger in diameter to increase the strength, is hard chrome plate, induction hardening, and fine polished for greater resistance to corrosion, thus, assuring of smooth action.

⑥ SHOCK ABSORBER OIL

KIC shock absorber oil with constant viscosity, blended with chemical additives provide optimum operating performance keeping its efficiency, in any weather conditions.

⑦ NITROGEN GAS

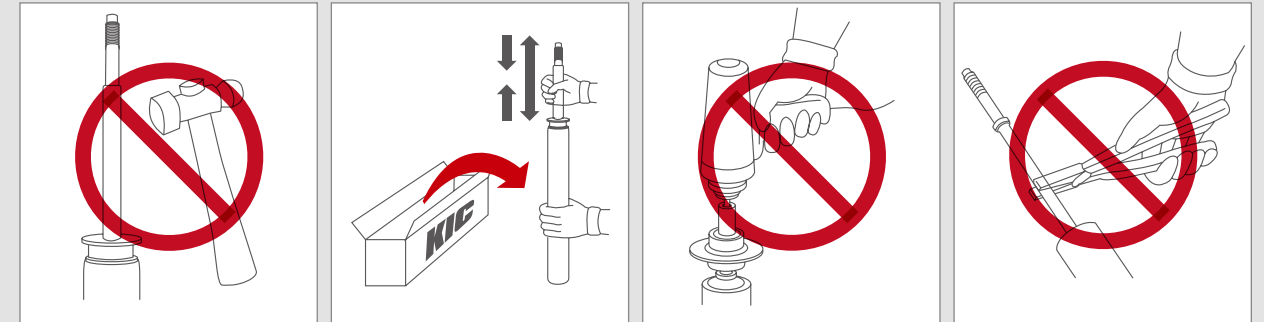

Nitrogen gas is filled in the reservoir.

⑧ CYLINDER TUBE

The cylinder tube, with a precision sliding surface mirror-like finish is designed to withstand tremendous internal working pressures, thus, providing greater reliability.

How to Install Shocks

When replacing shock absorbers, please select the correct shocks from the application listing, and follow the instructions below.

01. When removing the used shock absorbers

- ▶ Please check and remember the positions where each of the parts are currently installed. After installing new shocks, the fittings must be set back in the original position.
- ▶ Please remove dirt and rust from screws by using a stiff brush.
- ▶ Before removing the screws, please make sure to apply oil on to the rusted nuts & screws. If you tap delicately with a hammer, the oil will easily soak into the grooves.
- ▶ Please do not throw away the worn shock and the removed kits until installation of the new shocks is completed.

02. When installing the new shock absorbers

- ▶ Before installation, please check the KIC number on the shock body, and compare it with the application listing, making sure the model year and fitting position, etc., are correct.
- ▶ Please confirm that all the parts required for installation are included in the product package.
- ▶ Please use after shaking up and down 5-10 times, when any problem in pressure occurs.
- ▶ Please do not grab the piston rod, or damage it, with any type of metallic tool. Damaging a piston rod will ruin the rod seal, causing leakage.
- ▶ When installing the "eye type", please do not tighten the nut when the car body is jacked up. please tighten the nut in the natural position.
- ▶ In case of the bolt type, please follow the diagram printed on the plastic bag for the fitting kits or the mounting-kit listing.
- ▶ When installing a cartridge, please follow this procedure:
 - Remove the strut from the car body.
 - Remove the gland nut and take the internal parts out of the strut housing.
 - Remove the oil in the strut housing and clean the internal surfaces.
 - Insert the new cartridge into the strut housing.
 - Use the new gland nut contained in the box to fix the cartridge securely in place.
- ▶ Make sure that all nuts and bolts are tightened securely.

03. When scrapping the used shock absorbers

- ▶ Please take out the oil completely.
- ▶ For gas shocks, please take out the gas and oil completely.
- ▶ Follow your local regulation when throwing away old shock absorbers.

How to Install Shocks

When replacing shock absorbers, please select the correct shocks from the application listing, and follow the instructions below.

THREAD BROKEN OFF AT THE TOP OF PISTON ROD

Cause

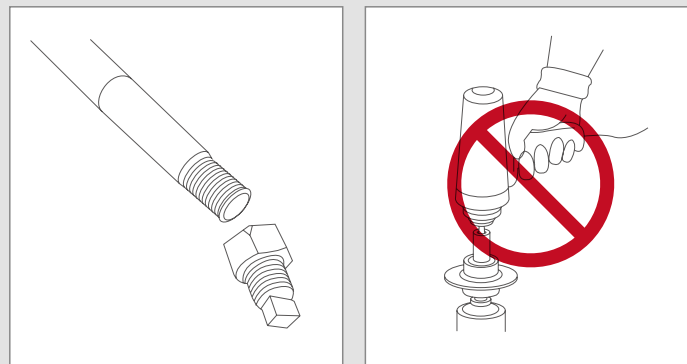

- ▶ Tightened with impact wrench

Prohibitions

- ▶ Impact Wrench can make Torque higher than the recommended limit.

Countermeasure

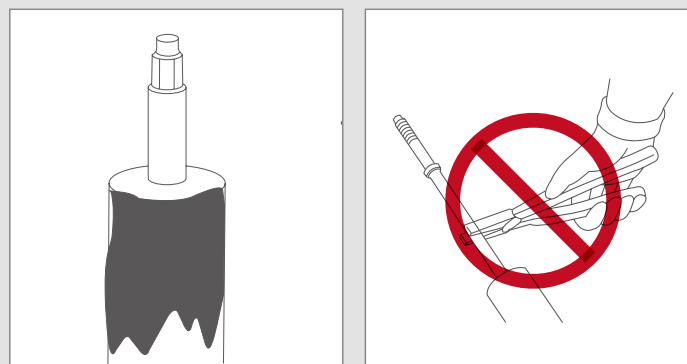

- ▶ Do not use any power tools.

BROKEN SEAL PARTS / OIL LEAKAGE / GAS LEAKAGE

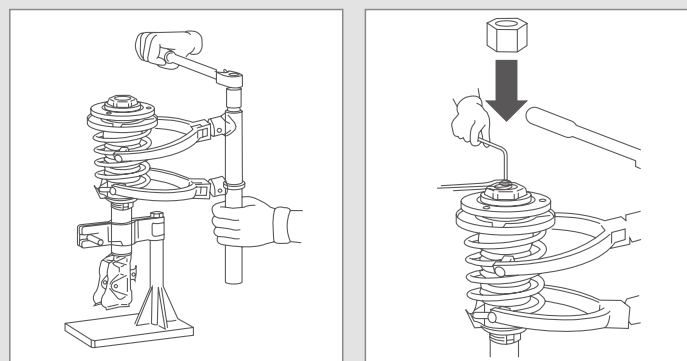

How to avoid the above mistake (Correct Installation of a nut on a piston rod)

- ▶ To hold a shock absorber (Outer shell) with vice system.
- ▶ To put "L bar wrench(T bar wrench)" on top of piston rod in order to fix a piston rod.
- ▶ To screw a nut with an open end wrench.

Prohibitions

- ▶ To grip a piston rod with any tools(plier, etc) may harm the surface of a piston rod.
- ▶ Its damage will break seal parts in shock absorber.
- ▶ Then oil leakage, gas leakage etc will happen.

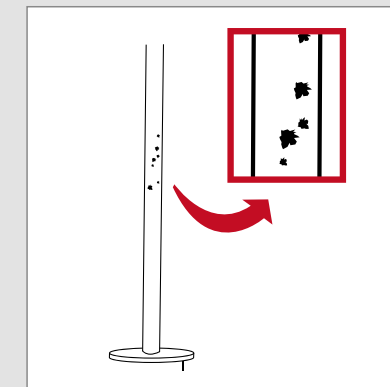

Oil Leakage

Normally Oil Leakage occurs due to "damaged oil seal or Bushing" Any damage to piston rod affects oil seal and bushing. Please check following points and investigate why the piston rod has been damaged according to the condition of it.

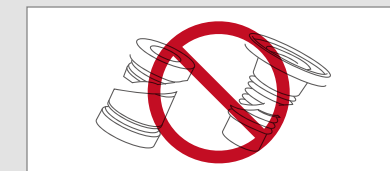

01.

Chrome peeled off on a piston rod

Cause

Damage due to worn out parts (Dust Cover, Bump Rubber)

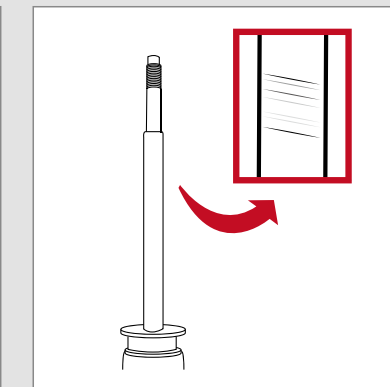

Countermeasure

Replace those parts with New Parts, and replace new KIC shock absorber

02.

Damage on surface of piston rod as in photo

Cause

Damage by tools(plier,etc) during installation of Shock Absorber

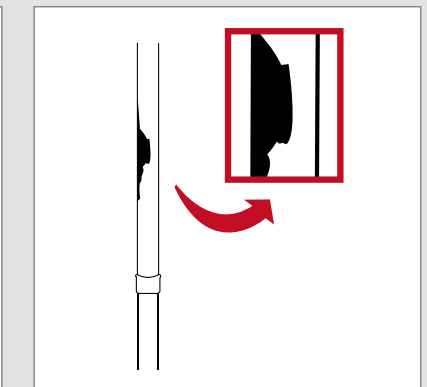

Countermeasure

Do not hold a piston rod by any tools Replace now KIC shock absorber

03.

Damage on one side of a surface of piston rod as in photo.

Cause

Unsatisfactory installation of shock absorber causes irregularity.

Example

- 1) Loose Tightening of a rod nut
- 2) Failure of process of parts

Countermeasure

Correct Installation with the right instruction of suitable tools.

SHOCK ABSORBER REPLACEMENT CRITERIA

STRUT TYPE	LEVEL 5	LEVEL 4	LEVEL 3	LEVEL 2	LEVEL 1
OIL LEAK CRITERIA ① OIL SEAL CASE ② SPRING SEAT ③ KNUCKLE BRACKET					
CONDITION	Slight oil seepage from oil seal case	Moderate oil seepage from oil seal case	Oil leak/drip on the seal case, extending below the spring seat	Oil leak, covering top, spring seat, and part of strut body	Oil leak, covering entire strut body, spring seat, and knuckle bracket
ACTION	Normal oil evaporation Not necessary to replace the shock absorber	Normal oil evaporation Not necessary to replace the shock absorber	Abnormal oil leak Replace the shock absorber	Abnormal oil leak Replace the shock absorber	Abnormal oil leak Replace the shock absorber
